FUMEFLEX

FEAS STAINLESS STEEL CHIMNEY LINERS

FUMEFLEX Chimney liners

Forest Energy and Air Solutions offers sets of stainless-steel chimney liners made in Quebec, **ULC S635, S640** certified by INTERTEK and compliant with Canadian building standards. All our Fumeflex chimney liners are made of practically corrugated 316 Ti stainless steel, which gives them exceptional strength and the flexibility required for this type of liner.

Since 1992, it is now mandatory for all built-in stoves to be connected to a stainless steel duct. But whether it's for safety or efficiency, all wood and gas flues should have a stainless steel liner.

FUMEFLEX sets

Each set includes a mesh cap, flashing sleeve, flashing, Fumeflex liner, base Tee sleeve, base Tee and 16 stainless steel screws or built-in starter.

Our accessories are made of 304-2B-26G grade stainless steel. The continuous welds leave no room for joint separation and are leakproof, which ensures each of our products an exemplary and unequaled durability. All our sets are complete and easy to install. FEAS products are sold separately and guaranteed for life. Certain conditions apply.

Certified
UL 1777
ULC S635
ULC S640

Cap

- Protects against water infiltration
- Keeps animals and debris out
- Corrosion resistant
- Prevents air infiltration and moisture formation

Flashing

- Thick plate of 14"x14"
- 304 stainless steel
- Corrosion resistant
- Impermeable to water infiltration

Sleeve

- Adds strenght to the flashing and base Tee attachment, providing added safety when cleaning

Built-in starter

Regular

Angled

Base Tee

Fast Clip

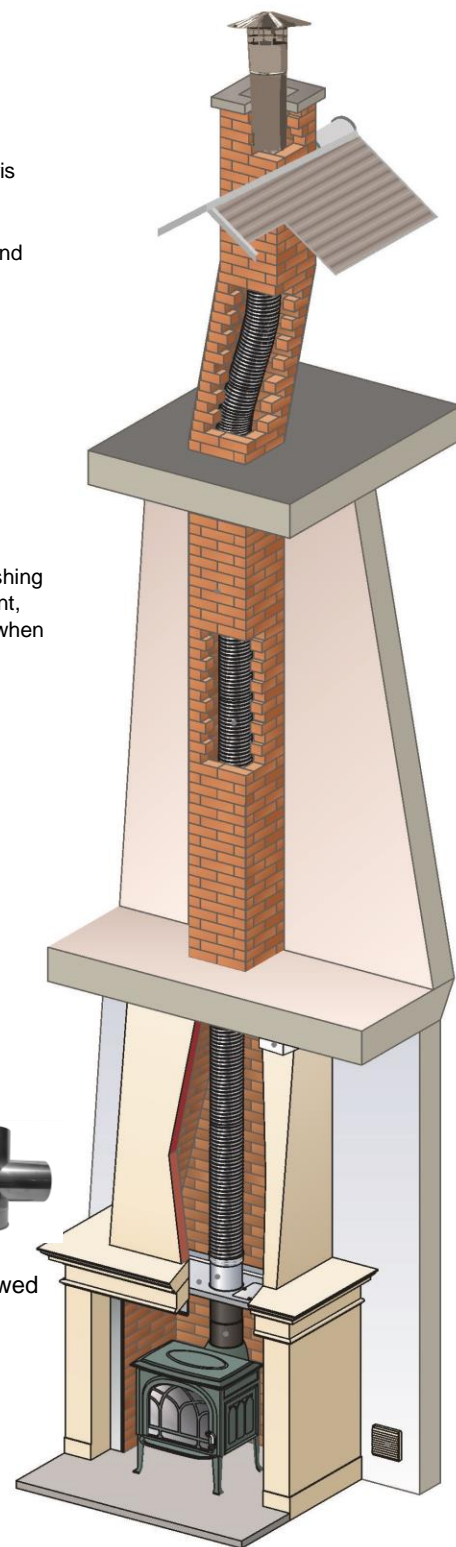

Clamps

Screwed

Other accessories available

- Flashing extension 12" and 18"
- Base Tee extension 12" and 18"
- Waterproof connector
- 45° and 90° elbow

FUMEFLEX

FEAS ALUMINUM CHIMNEY LINERS

FUMEFLEX chimney liner

Forest Energy and Air Solutions offers sets of aluminum chimney liners made in Quebec, **ULC S635, S640** certified and compliant with Canadian building standards. All our Fumeflex chimney liners are made of tightly corrugated type 3003 aluminum, which gives them exceptional strength and the flexibility required for this type of liner.

FUMEFLEX sets

The complete set includes a mesh cap, a flashing, a Fumeflex liner, a mortar guard and 9 stainless steel screws.

The fireplace kit includes a mesh cap, a flashing, a Fumeflex liner and 9 stainless steel screws.

Our aluminum accessories are type 3003. The continuous welds leave no room for joint separation and are leakproof, which ensures each of our products an exemplary and unequaled durability. All our sets are complete and easy to install. FEAS products are sold separately and guaranteed for life. Certain conditions apply.
